

SELF-TAUGHT GRANDMASTER

The Practical Part: TASK 2 (part-1)

The base strategic principles of a chess game are the basis of your chess understanding. That's why they are so important. You should follow them at EVERY move in your EVERY game. Then you will always play well and will have stable (and good) results.

If you have studied my course "**The Grandmaster's Secrets**" SERIOUSLY, then you probably already have a correct thinking system. Nevertheless, I'd like to warn you: **don't take it lightly!** You should train the base principles until they become a part of your chess nature and you start following them automatically.

Don't underestimate this task. Even quite a lot of GMs do NOT fully understand these basic principles and break them (and so lose the games)!

Your task: Study the games from the database "Games.pgn" Read the commentaries carefully. Pay attention on the positions where strong Grandmasters break the base strategic principles of a chess game.

The note: First you may like to repeat the lessons 1.1 and 1.2 from the course "The Grandmaster's Secrets".
